Chapter 1: Introduction to Python

Python is a high-level, interpreted programming language known for readable code. You write instructions in a text file ending in .py and run it with the python command, for example python hello.py. The print function shows output on the screen. Comments start with # and are ignored by Python.

```
print('Hello, World!')  # shows text
```

Chapter 1: Introduction to Python

Python uses indentation, not braces, to group code. You can also try code line by line in the interactive shell called the REPL. Extra tools come from modules, which you load with import, and third party packages are installed with pip.

```
import math
print(math.sqrt(16))
```
