Chapter 4: Loops

A for loop repeats a block once for each item in a sequence such as a list, a string or a range. The range function produces numbers, for example range(3) gives 0, 1 and 2.

```
for i in range(3):
    print(i)
```

Chapter 4: Loops

A while loop keeps running as long as its condition stays true. The break statement stops a loop early and continue skips to the next round. Make sure the condition eventually becomes false, or the loop never ends.

```
n = 0
while n < 5:
    n += 1
    if n == 3:
        break
```
